“Entering the Hyperspace” was inspired by the work of American ethnobotanist and visionary, Terence Mckenna. Mckenna, a mystic, advocated for the responsible use of psychedelic plants in order to access higher states of consciousness. He was a prolific speaker and writer on a variety of topics including, plant-based entheogens, shamanism, metaphysics, alchemy, language, philosophy, culture, technology, ethnomycology, environmentalism, and the theoretical origins of human consciousness. Some of Terence McKenna's major theories about hyperspace include the following: hyperspace is a realm of pure information that exists beyond the five senses; hyperspace can be accessed through the use of psychedelic plant medicine; hyperspace is a place of great beauty and wonder; and last but not least, the hyperspace is a key to understanding the nature of reality. McKenna died in 2000, but his work continues to inspire people around the world. He is remembered as a brilliant and insightful thinker who helped to open up new ways of thinking about consciousness, nature, and the human experience.
